SHAKEN BABY SYNDROME SIMULATOR™
Keeping Baby Safe From Harm

NEW! Available April 2007
Shaken Baby Syndrome Simulator™

Shaken Baby Syndrome is a very serious form of child abuse. Shaking a baby in anger or frustration can lead to permanent disability and even death.

New from Realityworks is the Shaken Baby Syndrome Simulator, designed with a transparent head that clearly shows the traumatic brain injuries caused by this underreported and often misdiagnosed form of child abuse. When the simulator is shaken, affected sections of the brain light up to illustrate where brain damage has occurred.

The instructor handbook addresses the many serious disabilities a child may suffer as a result of shaking, including blindness, seizures, learning disabilities, behavior disorders, paralysis—and even death.

Strategies for calming a baby or coping with a crying, inconsolable baby are included.

The Shaken Baby Syndrome Simulator™ from Realityworks® uses design elements from the “Mikey” Shaken Baby simulator developed by Nena Ray at Clarian Health, Indianapolis, Indiana.

Ms. Ray acknowledges the support she received on this project from Dr. Michael S. Turner of the Indianapolis Neurosurgical Group, the ThinkFirst Program and the Methodist Health Foundation.
